

Polyemide Printing Machine

July, 1996

Application Note #25

Application:

Polyemide Printing Machine

Type:

Motion Control

Objectives:

- Have an interface to monitor motion system operation.
- Make engineering updates to the system easily.

Product Used:

Model 900X

Solution:

The Model 900X interfaced with three axis of compumotor motion controllers. The 900X was used to monitor speed, position, cycle time, and printing thickness. All of these values could be changed by an engineer (password protected) to optimize each new run of product.
