

Using the Model 1000 to Manufacture Concrete Walls

July, 1996

Application Note #27

Application:

This application uses the Model 1000 to put patterns into the concrete walls.

Type:

Process Control

Objectives:

- Recipe storage
- Rugged interface

Product Used:

Model 1000

Solution:

Prefabricated concrete walls are used in business parks. These walls have patterns to make them pleasing to look at. Some patterns attempt to make the wall look like it is made of separate bricks. The Model 1000 was used to generate random patterns that were then stamped into the wet concrete.
